

Gold SCR Skin Antioxidant Serum

At the Cetuem research laboratories, only the finest ingredients are used; freshly collected plant extracts are prepared by aqueous infusion ensuring they remain rich in salicins and tannins. These have been proven to increase cell renewal, balance and protect the skin.

Ingredients / Benefits / Technology

Salix Nigra (black willow bark)

This is prepared by aqueous infusion of freshly collected bark from the tree which is rich in salicins. The extract is collected by vacuum distillation and contains a considerable high level of salicins. On the skin, salicins is hydrolysed to salicylic acid. Salicylic acid has a well documented effect on acne and problematic skin.

Tannins

Tannins have powerful antioxidant abilities which capture highly destructive environmentally generated free radicals before they can harm your skin.

Hydrolysed Ulva Lactuca Extract (algae protein)

This marine protein from the Aosa Seaweed Plant are sourced from the rough waters of the Breat Archipelago. These extracts due to their high performance and energetic systems help to restore, maintain and strengthen skin elasticity and increase cell regeneration and oxygenation. Hydrolysed Ulva Lactuca Extract is a powerful algae protein that protects the skin's elasticity and stimulates the fibers collagen and elastine, whilst helping give a reduction of fine lines and wrinkles.

Antioxidant Power

Research has shown that aging skin is the result of more than just years on the calendar.

Exposure to environmental elements like sunlight, smoke, and air pollution causes photo aging in skin.

Not only does this lead to the formation of lines, wrinkles, and pigmentation - it can lead to more serious skin conditions.

At the Cetuem research laboratories in-vivo and in-vitro tests have proven that strengthening the cellular structure of skin preserves the epidermis from ageing.

The ingredients in Cetuem's SCR Antioxidant Serum have shown that in both In-Vivo and In-Vitro Testing to have marked improvements in the skin, in the form of:

In-Vivo

- Fine lines diminishing.
- Deeper lines appear finer.
- Improvement in skin elastin.
- Helps to eliminate skin blemishes.
- Smoother skin texture.
- A more youthful look.

In-Vitro (algae extract)

- Gives cohesion and strength to the cellular architecture.
- Gives an improvement of the speed and protein synthesis.
- Gives a noticeable increase of cellular regeneration.
